The methodology of the Academic Journal Guide is based on a peer review process which is informed by statistical information relating to citation. The final 'ratings' given to journals are not based purely on weighted averages of journal metrics.

Academic Journal Guide 2015 - Chartered Association of ...

Journal ranking is widely used in academic circles in the evaluation of an academic journal's impact and quality. Journal rankings are intended to reflect the place of a journal within its field, the relative difficulty of being published in that journal, and the prestige associated with it. They have been introduced as official research evaluation tools in several countries.

Journal ranking - Wikipedia

All journals on the List must meet the substantive business element test and fall within relevant Australia and New Zealand Fields of Research (FoR) codes. It is just over a decade since we launched the Journal Quality List and so, in the second half of 2020, ABDC will be calling for feedback from key stakeholders as part of a review into the List ' s frequency, methodology, and scope.

6. Morocco: God and King

The theme of this volume is "Dealing with Volatility and Enhancing Performance". During a time when there is much concern about the perceived volatility of global equity markets, the insights offered here could be reassuring as well as useful.

In her admirable book, Wedlin entangles what [business school] rankings really are and why they have become so important. . . The book contains plenty to interest the growing army of business school employees whose duties, at least in part, are concerned with boosting their institution s position in the rankings. Education and Training In times when the management education field is increasingly impacted by a proliferation of ranking exercises, this book is a timely and welcome contribution. Linda Wedlin unpacks for us the real meaning of the contemporary explosion of rankings. Rather than simple classification schemes and mechanisms, rankings are, she suggests, arenas where the field of business education is being created and re-created. They are the loci of boundary-work , whereby a field is progressively evolving and constituting itself. This is a convincing study relying on rich empirical data and carefully anchored in relevant theoretical debates. A must-read for all those, academics, students, policy-makers and education professionals, who want to understand the complex contemporary logics of higher education in management but also probably well beyond. Marie-Laure Djelic, ESSEC Business School, Paris, France League tables appear everywhere and have become important aspects of business school environments. Based on in-depth and creatively combined empirical studies, Linda Wedlin provides us with explanations and insights on the emergence and impact of such rankings. This book should be of great value for all those who seek to "play the ranking game". It gives a fresh perspective on how classification mechanisms drive the emergence, boundary setting and change of organizational fields. Kerstin Sahlin-Andersson, Uppsala University, Sweden A fascinating study of the complex issues surrounding MBA rankings. Business schools really hate them but at times have to pretend to love them. Magazines and newspapers are really interested in their sales potential but have to make pretensions about their veracity. Linda Wedlin focuses on an area rich in hypocrisy and hype, but also one where there are real consequences: ranking furthered re-inforces the homogenising tendencies of MBAs. Anthony Hopwood, Saïd Business School, University of Oxford, UK This is a most fascinating topic, dealt with in a manner which is both serious and entertaining everyone in a business school would want to read it. Linda Wedlin s excellent research is presented with a no-nonsense approach if there is anything worth counting, she counts it, and then interprets it, no fuss. Exemplary! Barbara Czarniawska, Göteborg University, Sweden This engaging book offers a fresh perspective on the burgeoning field of European management education and its intense concern with rankings. Using a creative mix of well-crafted research tools, Wedlin deftly captures a professional field in transition as it both expands and develops shared standards. Walter W. Powell, Stanford University, US International comparisons and rankings of universities and business schools have proliferated in recent years. Ranking Business Schools provides a welcome analysis of this development and its implications for the field of management education, theorizing the role of classifications such as rankings in forming and structuring organizational fields. Focusing on the European experience with rankings and the subsequent response, the book illustrates how business schools use rankings to form identities and positions, and to draw boundaries for the field. By both creating and confirming belonging to a business school community and providing distinction within that group, rankings are important for defining an international field of management education organizations, constructing an international business school market, and constitute an arena for debating and establishing the boundaries of this field. Building an extensive theoretical framework for understanding classification

This edited volume seeks to explore established as well as emergent forms of governance by combining social network analysis and governance research. In doing so, contributions take into account the increasingly complex forms which governance faces, consisting of different types of actors (e.g. individuals, states, economic entities, NGOs, IGOs), instruments (e.g. law, suggestions, flexible norms) and arenas from the local up to the global level, and which more and more questions theoretical models that have focused primarily on markets and hierarchies. The topics addressed in this volume are processes of coordination, arriving at and implementing decisions taking place in network(ed) (social) structures; such as governance of work relations, of financial markets, of innovation and politics. These processes are investigated and discussed from sociologists ' , political scientists ' and economists ' viewpoints.

Over the last decade workforce diversity has attracted much scientific attention. Given the shortage of literature on issues related to homosexual, bisexual and transgender employees, compared to other facets of workforce diversity, this book opens up new perspectives on this issue. Emphasis is placed on the equal consideration of gay, lesbian, bisexual, and transgender issues. Thus the predominance of lesbian and gay issues in LGBT research (and practice), will be contrasted by an explicit consideration of the unique experiences, stressors and related needs of bisexual and transgender employees. Contributions provide deeper insights into the differing experiences the whole spectrum of LGBT employees make in the workplace in different national and occupational contexts. Furthermore, the collection offers contextualized insights for evaluating and conceptualizing organizational initiatives aiming at a higher level of inclusion for LGBT employees.

Now in its 20th edition, "Advances in Accounting" continues to provide an important forum for discourse among and between academic and practicing accountants on issues of significance to the future of the discipline. Emphasis continues to be placed on original commentary, critical analysis and creative research - research that promises to substantively advance our understanding of financial markets, behavioral phenomenon and regulatory policy. Technology and aggressive global competition have propelled tremendous changes over the two decades since AIA was founded. A wide array of unsolved questions continues to plague a profession under fire in the aftermath of one financial debacle after another. This volume of "Advances in Accounting" includes articles reflective of recent economic distress: articles on the effects of post bankruptcy financial reporting, measurement of decline in earnings persistence, re-estimations of bankruptcy prediction models, and an understanding of new assurance needs. It also looks at trends of significance to academics (trends in research and dissertations focus) and practitioners (trends in IS audits). With this 20th volume, "Advances in Accounting" makes a new commitment to the global arena by introduction of an International Section and a new international associate editor. As never before, the accounting profession is seeking ways to reinvent itself and recapture relevance and credibility. AIA likewise continues to champion change through this revised global editorial commitment.

A comprehensive, state-of-the-art examination of the changing ways we measure scholarly performance and research impact.

How do humanists speak for and from the humanities in an academy which values them less and less and market-driven approaches more and more? Jeffrey R. Di Leo provides a thorough critique of the higher education crisis and a set of practical and reasonable remedies for shaping the study and practice of the humanities in the academy of the future.

Presents more than 4400 national, regional, local and internation lists and rankings compiled from hundreds of respected sources.
